

THE ABC SUPPLY CHAIN

Aerospace Vendor Requirements

“Supplier/subcontractor shall:

Specify applicable ABC requirements to their suppliers and subcontractors; provide, with delivery of the product: Certification of Compliance with FAA Regulations and/or Certification of Conformity to Source Control Drawings, Standard Material Specifications or other specified requirements; obtain OEM, relevant authority and/or ABC Engineering approval of any proposed change to process or product specifications including any proposed repair of nonconforming product; maintain records for seven years as evidence of product conformity and actions taken; provide ABC, its customers and relevant authorities with access to facilities, tool and machine calibration records showing traceability to NIST, source material records and other records relevant to the order; and to actively participate in actions to improve the performance of the supply chain on an as needed basis.”
